

sarvam.ai

Full-stack sovereign AI for India

Series B

Foundation models, speech, and enterprise AI
built for 22 Indian languages

Bengaluru, India // Founded 2023 // Confidential — prepared for prospective investors

THE PROBLEM

India's languages are an afterthought for global AI models.

22

scheduled languages not well served

- 22 constitutionally scheduled languages, hundreds of dialects, and a population that is overwhelmingly more comfortable speaking than typing in English.
- General-purpose global LLMs are trained overwhelmingly on English and a handful of high-resource languages — quality drops sharply outside them.
- Regulated sectors (banking, insurance, government, defense) face real data-residency and auditability constraints that a foreign hyperscaler API cannot satisfy.
- India's government has an explicit sovereign-AI mandate — but no large, independent, India-built full-stack AI company existed to deliver on it.

1.4B

population, majority speech-first

0

large India-built frontier labs (pre-2023)

THE SOLUTION

The full AI stack for India — models, voice, and enterprise deployment.

Foundation Models

Sarvam-30B and Sarvam-105B (“Indus”) — multilingual, MoE architecture, 128K context, built for reasoning and agentic workflows.

Speech & Voice

ASR and TTS spanning all 22 scheduled languages — built on AI4Bharat research lineage, the deepest Indian-language speech corpus available.

Enterprise Deployment

Vertical fine-tunes and API / on-prem delivery for banking, insurance, telecom, healthcare, and government — where data residency is non-negotiable.

One platform, not a point solution — models, voice, and applications, built and deployed together.

PRODUCT

Sarvam-105B (“Indus”): our flagship model

Total parameters	~105B
Active parameters / token	~9B (MoE routing)
Context window	128,000 tokens
Beta release	February 20, 2026
Language coverage	22 scheduled Indian languages
Positioning	Complex reasoning & agentic workflows

Sarvam-30B

Mixture-of-experts model for lighter-weight, lower-latency multilingual tasks — released Feb 2026.

Next on the roadmap

Frontier model for agentic AI, coding, and cybersecurity — funded by this round.

TRACTION

Live with India's largest financial institutions.

ENTERPRISE CUSTOMERS

IndiaAI Mission

Selected by MeitY (April 2025) to build an indigenous foundation model, with access to government-procured GPU compute.

MARKET

A generational, government-backed shift to sovereign AI.

- India's IndiaAI Mission commits government compute and policy support to indigenous foundation models — a structural tailwind unique to a handful of markets globally.
- Regulated verticals (BFSI, government, healthcare, defense) require data residency and auditability that favor a domestic, government-endorsed vendor.
- 22 scheduled languages plus large speech-first populations represent a market global labs are only beginning to localize for.
- Expanding roadmap into agentic AI, coding, and cybersecurity broadens addressable market beyond language localization alone.

Why now

- MeitY / IndiaAI Mission live since 2024
- Sovereign-AI policy momentum globally
- Enterprise AI budgets shifting to India- specific compliance requirements
- Founders with government-scale delivery track record (Aadhaar)

BUSINESS MODEL

Enterprise API, government contracts, and vertical deployments.

Enterprise API & Licensing

Usage-based and licensed access to Sarvam-30B / Indus for enterprise integration teams.

Vertical Solutions

Packaged, fine-tuned deployments for banking, insurance, telecom, and healthcare workflows.

Government & Public Sector

IndiaAI Mission-linked development work and public-sector deployment engagements.

Revenue and customer-level financials are not disclosed publicly at this stage.

TEAM

Founders with government-scale delivery experience.

Vivek Raghavan

Co-founder & CEO

Co-creator of Aadhaar's biometric matching system at UIDAI — India's national digital identity program, covering over a billion residents. One of the largest biometric deduplication systems ever built.

Pratyush Kumar

Co-founder

Co-founder of AI4Bharat, the IIT Madras language-AI research group behind much of India's open Indian-language NLP and speech research — the direct research lineage for Sarvam's model and speech stack.

~350 team members as of mid-2026, up from ~114 in mid-2025.

COMPETITIVE LANDSCAPE

Positioned between global frontier labs and domestic sovereign-AI peers.

USE OF FUNDS

Deploying the Series B across model, compute, and go-to-market.

Raising \$300M Series B

\$234M first close // \$1.5B post-money valuation

LEAD INVESTOR

HCLTech — \$150M strategic commitment

CO-INVESTORS

Bessemer Venture Partners, Khosla Ventures, Peak XV Partners

REMAINING ALLOCATION

~\$66M toward the \$300M target

USE OF FUNDS

Frontier model R&D, compute expansion, vertical GTM
