

Kavach AI

AI compliance and fraud-detection agents for fintech companies.

Founders: Priya Raman (ex-Razorpay risk lead, Bangalore) and Alex Chen (ex-Stripe fraud engineering, San Francisco).

Seed round: raising \$2.5M.

The Problem

Mid-size US and EU fintechs spend 200-400 engineering hours per quarter building and maintaining manual compliance and fraud-review workflows. Existing compliance tooling (Alloy, Sardine) is priced for enterprise customers, leaving a gap for mid-market fintechs.

Our Product

Kavach AI deploys an autonomous compliance agent that reviews transaction flags, drafts SAR (Suspicious Activity Report) filings, and routes edge cases to human reviewers with full audit trails. Agent decisions are explainable and logged for regulator review.

Traction

6 paying design partners (mid-size US fintechs, \$2-15M ARR each).

\$22,000 MRR, up from \$9,000 three months ago.

Average time-to-review reduced from 4.5 hours to 40 minutes per flagged case across design partners.

Market

US fintech compliance software spend is estimated at \$3.1B annually across banks, fintechs, and payment processors (source: internal analysis based on public compliance-vendor revenue disclosures). Mid-market segment (our target) is roughly \$600M of that.

Team

Priya Raman - 6 years at Razorpay leading fraud/risk engineering, built their internal transaction-monitoring system used across 200+ enterprise merchants.

Alex Chen - 4 years at Stripe on the fraud engineering team, shipped 2 patents on anomaly detection.

Team of 7, split across Bangalore (5) and San Francisco (2).

The Ask

Raising \$2.5M seed at a \$16M post-money cap (SAFE). Use of funds: 60% engineering hires (Bangalore), 25% compliance/legal advisory, 15% GTM.
